

## **Bracket**

### **ENDERLE K type Barrel Valve Offset Bracket**

This bracket moves the barrel valve back 1.25" and out .600 inches. Works on Bug, Bird, and Buzzard.

12mm plate

This bracket makes room for the barrel valve to clear the starter and moves the barrel valve out so the front hat nozzle line clears easier.

**PN 35090-93971**

**List Price \$ 85.00+**

**Racer Decal Discount \$ 70.00 +**

If you have ever tried to get to the nuts that hold an ENDERLE K valve to the hat you know how hard they are to access, this bracket solves that problem and more. By moving the barrel valve back a bit it leaves more room for the starter on the front of the blower but also moves the fuel

lines back away from the path of a broken blower belt as well as gives much easier access to the left front injector nozzle.
