LENCO Reverser Gear Set

LENCO's are a very robust transmission with a long history of reliability. If there is a weak point, it is the reverser gear set, as the gear carrier is aluminium and the gears are standard automobile production planetary gears and usually function realizably.

Usually is the key word here.

Since we don't race in reverse it is often seen as a non issue BUT consider several situations that do occur from time to time. One is at the end of the burn out if the car is not brought to a COMPLETE stop when reverse is selected and the reverse lever is moved just a moment too soon it

will shatter the aluminium carrier or strip the teeth off the standard gears, or both. And there you sit in the middle of the track not being able to reverse back to race. What a way to lose. The other is if while backing up the driver touches the throttle, even a little bit, it will easily destroy the reverser gear set as well.

The solution is our all steel billet LENCO Reverser gear set with Nitrited Marging 350 gears. Supplied with the gear set is a Torrington thrust to replace the standard metal shim in the standard reverser package. Our gear set is a drop in, bolt in deal using standard button head cap screws.

For additional durability we suggest drilling and using pins to locate and hold the gear set, but it is not a requirement.

Part Number 32266-00001
List Price \$ 599.00+
Racer Decal Discount Price \$ 499.00+
